Abbott Alinity i - HBs Ag Qualitative assay

This is a screening test for Hepatitis B based on detection of Hepatitis B surface Antigen (HBsAg).

In case of borderline results, the test should be repeated in 6-8 weeks. The interpretation of the test should be done in conjunction with patient's clinical state, as well as other markers for Hepatitis B virus (HBV) infection.

Note: This test should not be performed within 3 weeks of vaccination, as it may give false positive result.

Electronically verified report. No signatures necessary.
Lab reports should be interpreted by a physician in correlation with clinical and radiologic findings
